PROFESSIONAL SUMMARY

Software Engineer and Technical Solutions Specialist managing the complete product lifecycle — from Figma wireframes and high-fidelity prototypes to production-ready native Android apps, full-stack web applications, and Python-powered backends. Committed to WCAG 2.2 AA accessibility, clean architecture patterns (MVVM), and test-driven development. Nearly a decade of client-facing technical support and top-ranked B2B/B2C sales experience provides a user-empathy and communication advantage rarely found in pure engineers.

EDUCATION

Bachelor of Science in Computer Science

Southern New Hampshire University
Sep 2021 – Dec 2024

Summa Cum Laude

3.99 GPA • President's List

Associate of Arts

Tyler Junior College
General Studies, IT Focus

TOOLS & TECHNOLOGIES

Languages

Python, JavaScript, TypeScript, Kotlin, Java, C/C++, C#, SQL

Frontend & UI Design

React, HTML5, CSS3, Tailwind CSS, Vite, Angular, Figma, SVG Animation, WCAG 2.2 AA Accessibility

Mobile Development

Android SDK, Jetpack Compose, Material Design 3, MVVM Architecture, Hilt, ExoPlayer, Firebase

Backend & Databases

Node.js, Spring Boot, MySQL, MongoDB, AWS DynamoDB, REST APIs, ERD Database Design

Infrastructure, QA & Methodology

Git/GitHub Actions, Docker, CI/CD, Agile/Scrum, UML/Systems Design, JUnit, Espresso, MockK, Postman

PROFESSIONAL EXPERIENCE

Software Engineer | Technical Solutions Specialist

Jan 2025 – Present

App.Buddy (Independent Venture)

- Flick — Android & ML:** Solo-engineered a production-grade native Android app (Kotlin/Jetpack Compose/MVVM) featuring a custom ML recommendation engine and async preloading (published to Google Play closed test track).
- Wormhole — Python Engine:** Architected a terminal-based sci-fi adventure featuring a custom OOP game engine, event-driven state management, and multithreaded asynchronous updates.
- The Existence Paradox — React/TypeScript:** Built a high-fidelity interactive SPA (React/Vite) with complex state hooks, conditional rendering, and decision-tree navigation, wrapped in a WCAG 2.2 AA-compliant dark-theme UI with programmatic smooth scrolling and fluid typography.
- CI/CD & DevOps:** Established automated testing and deployment pipelines (GitHub Actions, JUnit, Espresso, MockK), identifying logic bugs and leveraging GenAI toolchains to accelerate development cycles across all projects.

Additional Professional Experience

Tech Design IT Support Remote Top 1%

- B2B/B2C Sales (Top 1%):** Consistently ranked #1 among 100+ representatives for most of five consecutive years in outbound sales for Fortune 500 and enterprise clients, such as AT&T, AMEX, QVC, and Blue Cross Blue Shield. Authored team call scripts, trained junior reps on objection handling and closing, and self-earned a Texas State Insurance License within one month to unlock a 35% pay increase.
- Technical Support (Remote):** Delivered remote help desk support for DirecTV Premium Protection Plan subscribers and ISP/VoIP clients via remote desktop tools; managed CRM accounts and documented resolutions for Asurion-acquired companies.
- Technical Designer:** Independently designed and constructed a standalone music studio using AutoCAD and SketchUp, and partnered with a master carpenter to build a 3-bedroom home.

FEATURED TECHNICAL PROJECTS

	Flick (Android)	<i>Kotlin, Jetpack Compose, MVVM, Hilt, Firebase</i>	Archive.org-powered streaming client with a custom ML recommendation engine (cosine similarity) and async preloading for low-latency playback. Published to Google Play (closed testing).
	Wormhole	<i>Python, OOP, Multithreading, ANSI</i>	Terminal sci-fi adventure with a custom game engine, event-driven state management, dynamic ANSI rendering, and a real-time interactive map via multithreaded async UI updates.
	The Existence Paradox	<i>React, TypeScript, Tailwind, Vite</i>	Interactive philosophical SPA with decision-tree navigation, complex state hooks, and a WCAG 2.2 AA dark-theme UI featuring fluid typography and programmatic smooth scrolling.
	Super Mario Maker UI/UX	<i>Game Design, Analytics, User Psychology</i>	Top 0.003% global creator (Rank #39/1.3M+). Designed levels achieving 133k+ stars via iterative feedback and metrics.
	Systems Analysis & Design	<i>UML, SDD, Architecture, Markdown</i>	Authored a System Design Document (SDD) for DriverPass, a three-tier scheduling platform, mapping system architecture through UML class, use case, activity, and sequence diagrams for developer handoff.
	Multi-Platform Product Design	<i>Figma, Prototyping, Wireframing, Accessibility (WCAG)</i>	End-to-end design process from low-fidelity wireframes to polished hi-fi mockups and developer handoff documentation. Demonstrated in Money Mobile, an accessibility-driven loan-tracking app designed for low-bandwidth embedded devices.
