PROFESSIONAL SUMMARY

Software Engineer and UI Developer managing the complete product lifecycle — from Figma wireframes and high-fidelity prototypes to production-ready native Android apps, full-stack web applications, and Python-powered backends. Committed to WCAG 2.2 AA accessibility, clean architecture patterns (MVVM), and test-driven development. Over a decade of client-facing technical support and top-ranked B2B/B2C sales experience provides a user-empathy and communication advantage rarely found in pure engineers.

EDUCATION

Bachelor of Science in Computer Science

Southern New Hampshire University
Sep 2021 – Dec 2024

Summa Cum Laude

3.99 GPA • President's List

Associate of Arts

Tyler Junior College • IT Focus

TOOLS & TECHNOLOGIES

Languages

Python, JavaScript, TypeScript, Kotlin, Java, C/C++, C#, SQL

Frontend & UI Design

React, HTML5, CSS3, Tailwind CSS, Vite, Angular, Figma, SVG Animation, WCAG 2.2 AA Accessibility

Mobile Development

Android SDK, Jetpack Compose, Material Design 3, MVVM Architecture, Hilt, ExoPlayer, Firebase

Backend & Databases

Node.js, Spring Boot, MySQL, MongoDB, AWS DynamoDB, REST APIs, ERD Database Design

Infrastructure, QA & Methodology

Git/GitHub Actions, Docker, CI/CD, Agile/Scrum, UML/Systems Design, JUnit, Espresso, MockK, Postman

PROFESSIONAL EXPERIENCE

Software Engineer | UI Developer

App.Buddy (Independent Venture)

Jan 2025 – Present

- **Flick — Android & ML:** Solo-engineered a production-grade native streaming app (Kotlin/Jetpack Compose/MVVM/Hilt) with a custom ML recommendation engine using cosine similarity for personalized content discovery and async preloading for low-latency ExoPlayer playback; published to Google Play (closed testing track).
- **Wormhole — Python Engine:** Architected a terminal-based sci-fi text adventure featuring a custom OOP game engine, event-driven state management, dynamic ANSI rendering, and multithreading for asynchronous live UI updates without blocking player input.
- **The Existence Paradox — React/TypeScript:** Built a high-fidelity interactive SPA (React/Vite) with complex state hooks, conditional rendering, and decision-tree navigation, wrapped in a WCAG 2.2 AA-compliant dark-theme UI with programmatic smooth scrolling and fluid typography.
- **CI/CD & DevOps:** Established automated testing and deployment pipelines (GitHub Actions, JUnit, Espresso, MockK) and leveraged GenAI toolchains to accelerate development cycles across all projects.

Previous Experience & Independent Projects (2002–2021)

Leadership

IT Support

Remote

Top 1%

- **B2B/B2C Sales (Top 1%):** Consistently ranked #1 among 100+ representatives for nearly five consecutive years in outbound sales for Fortune 500 clients (AT&T, AMEX, QVC, Blue Cross Blue Shield). Authored team call scripts, trained junior reps on objection handling and closing, and self-earned a Texas State Insurance License within one month to unlock a 35% pay increase.
- **Technical Support (Remote):** Delivered remote help desk support for DirecTV Premium Protection Plan subscribers and ISP/VoIP clients via remote desktop tools; managed CRM accounts and documented resolutions for Asurion-acquired companies.
- **Team & Store Management:** Managed up to 8 employees per shift across restaurant and retail environments, handling daily monetary reconciliation, new hire training, and independent closing operations.
- **Builder & Caregiver:** Primary caregiver for two children while designing and constructing a 3-bedroom home and a standalone music studio from the ground up using AutoCAD and Google SketchUp.

FEATURED TECHNICAL PROJECTS

	Flick (Android)	<i>Kotlin, Jetpack Compose, MVVM, Hilt, Firebase</i>	Archive.org-powered streaming client with a custom ML recommendation engine (cosine similarity) and async preloading for low-latency playback. Published to Google Play (closed testing).
	Wormhole	<i>Python, OOP, Multithreading, ANSI</i>	Terminal sci-fi adventure with a custom game engine, event-driven state management, dynamic ANSI rendering, and a real-time interactive map via multithreaded async UI updates.
	The Existence Paradox	<i>React, TypeScript, Tailwind, Vite</i>	Interactive philosophical SPA with decision-tree navigation, complex state hooks, and a WCAG 2.2 AA dark-theme UI featuring fluid typography and programmatic smooth scrolling.
	Super Mario Maker UI/UX	<i>Game Design, Analytics, User Psychology</i>	Top 0.003% globally — ranked #39 of 1.3M+ creators. Designed levels achieving 133k+ stars and a 20% engagement rate through iterative player feedback, gameplay metrics, and YouTube feature coverage.
	Systems Analysis & Design	<i>UML, SDD, Architecture, Markdown</i>	Authored a System Design Document (SDD) for DriverPass, a three-tier scheduling platform, mapping system architecture through UML class, use case, activity, and sequence diagrams for developer hand-off.
	Multi-Platform Product Design	<i>Figma, Prototyping, Wireframing, Accessibility (WCAG)</i>	End-to-end design process from low-fidelity wireframes to polished hi-fi mockups and developer handoff documentation. Demonstrated in Money Mobile, an accessibility-driven loan-tracking app designed for low-bandwidth embedded devices.
